

GEORGETOWN SOUTH PROJECT CONSTRUCTION UPDATE

The Georgetown South Project will provide infrastructure improvements to meet existing GO Transit ridership demand and future growth. It will also accommodate the new Air Rail Link service between Union Station and Pearson International Airport.

West Toronto Diamond Grade Separation

What we are doing

Pile wall validation:

- Removing soil from within the interlocking pipe piles
- Filling the piles with concrete and sealing materials to create water tight walls for the train underpass
- Installing sheet piles – flat piles to help keep ends of corridor water tight
- Removing and replacing a small percentage of deficient pipe piles previously installed – beginning early March

Crane-mounted augers (drills) remove soil from pipe piles

How will this impact you?

The pile wall validation work will create some noise and vibration:

- Residents may hear background “humming” from the water pump, generator, and compressed air systems needed to clean out the piles
- Vibration methods will be used to install sheet (flat) piles
- A combination of vibration and impact methods, similar to methods used during the latter part of 2010, will be used in the removal and reinstallation of pipe piles
- We will continue to monitor the noise and vibration levels and post the reports online at www.gotransit.com/gts
- Dump trucks will remove excess soil from the site
- For the foreseeable future, work will occur during regular construction hours from 7 a.m. to 7 p.m. weekdays. Advance notice will be provided for work on Saturdays when necessary.
- The Junction Road/Old Weston Road intersection will remain open until the summer of 2011 -- advance notice of any full road closure will be provided

We appreciate your continued patience and understanding during construction.
