

The Georgetown South (GTS) Project will provide infrastructure improvements to meet existing GO Transit ridership demand and future growth. It will also accommodate the new Air Rail Link service between Union Station and Pearson International Airport.

Denison Road Grade Separation

The City of Toronto completed the first round of sewer and water main relocation in July. The second phase of the relocation is expected to be completed in late August, first week of September. The next phase will be to relocate the main combined sewer (both water and sanitary pipes) beginning in September.

Clearing and grubbing along the rail GO rail corridor to remove excess vegetation and trees has begun, and will continue into

September. This is necessary to prepare for construction in the rail corridor.

Work has begun to build the underpass foundation. This involves using a drill rig (see picture) outfitted with drill bits to auger a cavity to insert a steel caisson (liner) which is then filled with concrete forming the walls of the underpass. This work will continue through the summer into the fall.

Drill rig with drill bit attached. Steel caisson (liner).

Construction worker pouring concrete in steel caisson.

For more information on the Denison Road Underpass, please contact Amna at 416-241-2300.
